MEETING REPORT

Team Name: Quarantivity   **Date of Meeting: 08 April 2020**

Start Time: 18:00   End Time: 20:00   Meeting Location: Google Meet

Moderator: Klajbi Subashi   Recorder: Sara Caushaj

Other Members Present: Gjergji Piperi, Klaid Mejdiaj, Sara Bendaj
Members Absent: 0

Topics Discussed:
To begin with, we discussed about each other's findings regarding the task assigned. Each of us gave ideas for the programming language that would suit us. Gjergji found two platforms that we could use for guidance, but their programming language was Java and we agreed that that wasn't our strong suit. After each argument that the members gave we arrived at the conclusion that we would use PHP language for our backend development and css/javascripts/hmtl/bootstrap for our frontend. Mainly because we have more baggage from last semester, but also because it offers cross platform, greater database diversity and its speed. We also have a few options on the framework and on the database we are going to use so we agreed we will decide next time. Klaidi and Sara Caushaj discussed more with the client to decide about the design(appearance)of the software application so we could have a better idea what interfaces to use.

Decision Made:
Our program will offer:
1. **Dashboard (where they will see the business performance with graffics)**
2. **Agent Monitoring (following their work step by step online and see how they accomplish their tasks)**
3. **Clients (Clients Data and where they are located)**
4. **Warehouses (operations related to warehouse)**
5. **Planning the daily itinerary for agents to the clients and suppliers**
6. **Reports**

We will use PHP language for our backend development and css/javascripts/hmtl/bootstrap for our frontend.

Tasks Assigned:
Gjergj Piperi will make a more detailed research about the frameworks and databases we laid out as options, so we can be sure in our choice next time. Klajbi Subashi and Sara Caushaj will make a summary of the business and their employess. They will also do the sketches based on what the client said they want the application design to be.

Klaidi will work with Sara Bendaj to analyze the economic terms and financial part of the business, and also will look to similar existing systems and see their flaws and what we can learn from them.

Time, Place, and Agenda for Next Meeting:
14 April 18:00 , Google Meet.
